

Customer Buying Behaviour Predictions

Feature Engineering

Added “Group Booking” and “Total Extra Features”

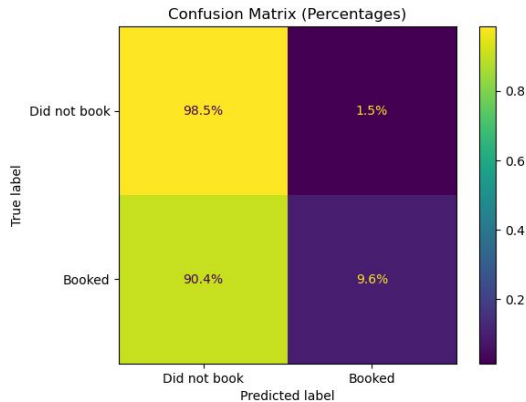

Limitations

Dataset imbalanced - substantially more non-bookings

Random Forest Model

Accuracy: 85%

Much more accurate predicting non-bookings (92%/16%)

Cross-Validation F1 Score: 10% accuracy for identifying bookings

Summary

- Good for predicting non-bookings
- Limited use predicting bookings
- Suggest more balanced dataset

Top Features for Booking Completion
